2017-02-02	Switching between I_Site mode and Standalone mode in Smart Access

After having downloaded the Smart Access pc software, this is how you can switch between I_Site mode and standalone mode:

- 1) Create a shortcut to "Smart access.exe" for example on your desktop:

- 2) Right-click on the shortcut and select "Properties"

- 3) Go to "Target"

- 4) Edit the ending of the Target field.

You can choose between:

--i_site

starts the program in I_Site mode

--standalone

starts the program in standalone mode

--select

shows the selection dialog (like for the first program startup), allowing you to select each time the software is started

For example, if you want I_Site mode to be started each time, the Target shall look like this:

"C:\Programme\Smart access\Smart access.exe" --i_site
